High-frequency power supply with current limitation

[www.axima-power.com](http://www.axima-power.com)

## FOR DC POWER SUPPLY

## FOR STATIONARY AND TRACTION BATTERIES

### Usage

- adjustable power supply for electroplating and electrochemistry
- service deployment in stationary applications (in case of charger failure)
- forming of new batteries
- IU or IUa characteristic
- regeneration (desulphating, equalisation) of traction and stationary batteries

### Features

- high-frequency charger, modular construction
- universal – for all battery types
- four-coloured graphic display

### Settings, operation

- manual setting of parameters via front panel
- wide range of setting: 0 – I<sub>max</sub>, 0 – U<sub>max</sub> (according to type)
- possibility of shutoff after lapse of preset time
- possibility of shutoff after delivery of preset Ahs
- possibility of operation with no time limits
- remote control option (activation and deactivation)
- remote signalisation (optical, potential-free)

### Versions

- standard – wall mounted, IP20
- portable – on AXI FF MONO stand, with optional handle
- mobile – in a tubular frame fitted with wheels (multi-module types)

### Optional equipment

- external signal column
- relay signalization

VOLTIS is an adjustable voltage power supply with current limiting. VOLTIS can be used as a high-frequency battery charger, mainly for stationary applications. It is also ideal for regeneration and maintenance of all battery types.

# LARGE CLEAR DISPLAY

REQUIRED	ACTUAL

RETURN	

## Display colours:

- blue** – standby mode
- yellow** – in operation
- green** – cycle finished
- red** – error (with failure code)

# VOLTIS

- (1) requested output voltage
- (2) information bar
- (3) output voltage value
- (4) current supply value
- (5) elapsed time or provided capacity
- (6) button up
- (7) button down
- (8) and (9) function buttons
- (10) USB connector
- (11) deactivation parameters (time or capacity)
- (12) current limiting
- (13) "STOP" button
