AxiSOURCE

AX4MV / AX4MP

Adjustable output voltage and current over a wide range.

Remote control option:

- Analog signals when using the AXIF108 control unit
- MODBUS protocol via RS485 when using the AXIF108 control unit

Possibility of parallel arrangement of modules.

Integrated overcurrent and overvoltage protection.

Galvanic isolation input - output.

Power supply: 3ph 400V / 1ph 230V.

AX4MP24-60	0...35 V	60 A
AX4MV24 / AX4MP24	0...35 V	100 A
AX4MV48 / AX4MP48	0...70 V	50 A
AX4MV96 / AX4MP96	0...140V	25 A

High-frequency switched AC/DC converter with MOSFET technology, digitally controlled DC voltage and current source of modular design. Individual sources can be operated separately or arranged in parallel into groups. The AXIF108 expansion communication unit can be used to control the source. It allows controlling a group of sources via the RS485 serial line, using external analog signals, potentiometers or internal trimmers. The device can be used as industrial power supplies, high-power laboratory power supplies, battery chargers, electromagnet power supplies or in electroplating.
