your projects**

# AxiSOURCE

## AX5MV

**Adjustable output voltage and current over a wide range.**

**Remote control option:**

- Analog signals when using the AXIF108 control unit
- MODBUS protocol via RS485 when using the AXIF108 control unit

**Possibility of parallel arrangement of modules.**

**Integrated overcurrent and overvoltage protection.**

**Galvanic isolation input - output.**

**Power supply: 3ph 400V**

High-frequency switched AC/DC converter with MOSFET technology, digitally controlled DC voltage and current source of modular design. Individual sources can be operated separately or arranged in parallel into groups. The AXIF108 expansion communication unit can be used to control the source. It allows controlling a group of sources via the RS485 serial line, using external analog signals, potentiometers or internal trimmers. The device can be used as industrial power supplies, high-power laboratory power supplies, battery chargers, electromagnet power supplies or in electroplating.

### Technical parameters

INPUT	AX5MV – all types		
Rated supply voltage	3f 400 V, 50/60 Hz		
Input supply voltage range	3f 360...460 V AC / 470...650 V		
Rated power input	DC* 5550 VA		
Input current	8.0A		
Starting current	< Inom		
Recommended input fuse	3P 10 A, characteristic C
